1. The lecture addresses the terms *multimedia*, *multimedia data*, and *multimedia DBMS*. How are these terms connected? Discuss your arguments.

2. What is the *retrieval* concept. What does that mean and are there different types of retrieval? If there are differences then discuss them.

3. In the context of multimedia retrieval, how can we work with multimedia data? Which assumptions do we have to make?

4. Discuss the different requirements of multimedia data storage in contrast to ordinary data.

Good Luck!
